

Warehouse fulfillment methods of the past are costly

Imagine the impact of your safety and efficiency objectives, if you could accomplish replenishment with automation instead of the use of forklifts?

BEFORE

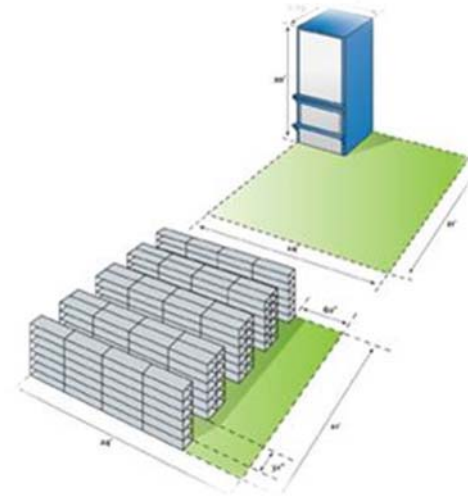

Before to After

How It Could Be:

- Parts are stored in a fully automated system
- High-density storage system requiring less 100ft per model
- No need for forklifts for replenishment picking
- Inventory software manages inventory control and accuracy
- Inventory software manages order accuracy

AFTER

The Savings:

- Employee costs are reduced by as much as 80%
- Inventory floor space is reduced by 60-80%
- Inventory accuracy is improved up to 50%
- Allows a reduction in inventory of 12-18%
